

Coding for the functionality -2

What is our GOAL for this MODULE?

The goal for this module is to add the remaining functionality to the app and complete it.

What did we ACHIEVE in the class TODAY?

- We added a database to our app.
- We coded to add some functionality to the app.

How did we DO the activities?

1. We listed down all the user actions and app behavior for each screen.
2. We wrote code to add these behaviors in the app functionality.

What's NEXT?

In the next class, we will add the remaining functionality for the app. Our next class will be the capstone class so don't forget to bring your parent to the class.
